Preface

It is with great satisfaction that the National Institute of Statistics (INE) presents the Statistical Yearbook of Cabo Verde (AECV) that is intended to serve as an important publication, comprehensive and of reference, providing statistical data on various aspects of the reality of the Cabo Verdean Society.

The Statistical Yearbook is a public service publication, very particular, that many NSI edit, representing a synthesis of all the official statistics on the state of the respective country's society.

The fundamental objective of AECV is to work as a "gateway" to our country's Official Statistics, providing a "reference publication" of INE, by serving as the best card-to-visit.

The first AECV, after a period of more than two decades is borne by the INE as a particular reference publication since, unlike other publications, within the sector, is addressed far more to the public than to the experts, presenting a summary of the official national statistical production.

Thus, the AECV seeks a balance on meeting the needs of this heterogeneity of users, by reflecting the involvement of all relevant and pertinent expertise within INE.

The AECV was drawn from a set of official statistics produced by the National Statistics Institute, by other Official Statistics Producers (BCV and INE delegate Bodies) and information provided by other public bodies, and the raw material for the production of these statistics is the information provided by citizens, businesses and organizations and public sector services, through answers to their censuses and surveys, and data from administrative sources, which allows it to continue its mission to "produce and disseminate so efficiently, quality official statistical information [reliable, timely and punctual] necessary for the objective knowledge of a changing society, which helps Cabo Verdeans to get to know their country, their people, their resources, their economy, their society and their culture."

It should be noted that the reference period throughout this edition of AECV is not uniform, and the temporal scope is 2010-2015.

This publication is divided into 10 chapters: Territory; Population and Social Conditions; Health; Education; Economy and Finance; External Trade; Industry, Trade and Services; Agriculture and Fisheries; Environment; and Political Participation - which, in turn, are explained in more detail in the respective subchapters.

INE thanks the valuable cooperation of all the institutions that provided information for the contents of this Yearbook and, especially, the professionalism of the technicians involved that make this first edition possible. Finally, requests its users that submit all criticisms and suggestions they deem relevant to improve AECV next edition.

António dos Reis Duarte
President

Presentation

This document, Cabo Verde Statistical Yearbook 2015 (AECV 2015), delivers statistical information provided by various bodies of statistical production that are part of the National Statistical System (NSS) as well as other institutions that are not part of NSS, which have also provided information contained in this yearbook.

The information highlighted in this document refer to the most recent period possible, (2015 - depending on data availability) and the vast majority of the data covers the period 2010-2014. Consisting of thirty-six subchapters, gathered in ten themes (Territory, Population and Social Conditions, Health, Education, Economy and Finance, Industry, Commerce and Services, Foreign Trade, Agriculture and Fisheries, Environment and Political Participation) also provides a brief analysis for each theme based on the data in order to assist the user in reading and understanding of the information contained.

The structure of the tables usually presents data in time series, giving emphasis to the most recent year data being disaggregated at the level of municipalities or the islands (and where possible the breakdown in terms of sex, or the means of residence) allowing comparability between different entities over time.

The yearbook 2015 besides the printed version can also be found in the digital version (PDF) disseminated on the official website of INE - free access (<http://www.ine.cv>) the user has easy access (can download / view the document at any time).

The AECV 2015 is drafted according to the rules of the new Spelling Agreement.

The Instituto Nacional de Estatística

Mission

The mission of the National Institute of Statistics (INE) is to produce and disseminate efficiently, official quality statistical information (reliable, current and timely) necessary for the objective knowledge of a changing society, to help the Cabo Verdeans better understand their country, their people, their resources, their economy, their society and their culture.

Vision

INE seeks to be recognized as a statistical institution of reference:

- As a producer and supplier of official quality statistical information,
- As a technically independent and credible organization;
- For the contribution to the promotion of statistical literacy;
- By engaging in effective international cooperation.

Values

INE guides its action by the following values:

- Professionalism: employee performance is driven by demanding principles of professionalism and ethics governing the official national statistical activity.
- Commitment to Quality: Of the products and official statistical services, keeping in mind that the activity of each one of the technical staff contributes to the production of quality products and services, defined by the criteria of relevance, accuracy, timeliness, punctuality, accessibility, clarity, comparability, consistency and comprehensiveness.
- Guidance for users: Corresponds to the notion that the current and potential users of official statistical information are the reason INE to exist, which involves the allocation of a very high value to users' needs and the usefulness of joint work, in order to meet your expectations.
- Openness to Society: Willingness to give continuous attention to changes in society, in order to adapt and above all, to anticipate the products and official statistical services, to the changing needs of users.
- Efficiency: Management based on the principle of cost / benefit analysis, implementing technical and methodological processes that can effectively optimize the use of all available resources.
- Respect for Primary Information Providers: High regard by respondents that provide individual data for the production of official statistics, finding technical solutions to meet the growing needs of official quality statistical information, minimizing the burden on respondents.
- Motivation and Human Resources Development: INE guides management decisions and actions based on motivation and professional development of its technicians.
- Innovation: INE values and encourages cognitive thinking activities that challenge conventions, towards the continuous improvement of methods, processes, official statistical products and services in order to improve efficiency and effectiveness.

GDP at market Prices (2014)	154.941	(Millions of escudos)
GDP per capita (2012)	297.147	(CVE)

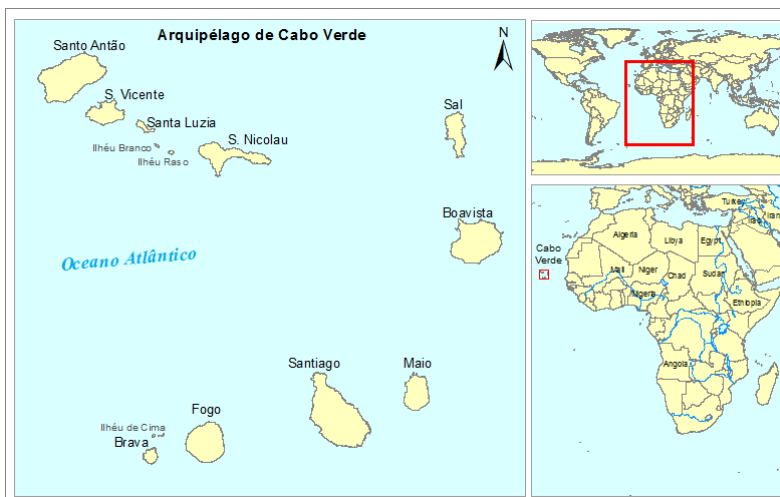

The Territory

The statistical yearbook presents in this chapter, the territory as its theme. It is intended to present the main data on the physical aspects of the territory, on the administrative division of the transport infrastructure and also on human occupation, especially in occupation and density dimensions.

The Territory of Cabo Verde

Small archipelagic country, formed by ten islands (Santo Antao, Sao Vicente, Santa Luzia, São Nicolau, Sal, Boa Vista, Maio, Santiago, Fogo and Brava) and five main islets (Branco, Raso Luis Carneiro, Grande and de Cima) with an approximate area of 4,033 km² are located between the parallels 14° 23 'and 17° 12' North latitude and the meridians of 22° 40 'and 25° 22' to the west of Greenwich.

Atlantic Islands of volcanic origin, are at a distance of about 500 km from Senegal promontory that

gives the country its name. In geomorphological terms, mainly two groups of islands can be distinguished, first the mountainous islands (Santo Antão, São Vicente, Santa Luzia, São Nicolau, Santiago, Fogo and Brava) predominantly mountainous landscapes with altitudes that reach 2829 meters and very rugged reliefs and secondly the flat islands (Sal, Boavista and Maio) characterized by almost non-existence of mountainous reliefs and where you can find extensive white sand beaches lapped by the turquoise Atlantic.

They appear as the westernmost point of Africa (17 ° 02'40.9 "N 25 ° 21'39.5 W - island of Santo Antão) the islands are shown arranged in a horseshoe shape and due to its geographical location (includes the group of Sahel countries) has an arid and semi-arid, warm and dry climate, with average annual temperature of around 25 ° C, low rainfall, we can identify two seasons that define the climate of the islands: the time of breezes (dry season - December to June) and the rainy season, which is usually between August to October, and July is the month of transition).

Discovered between 1460 1462, by navigators in the service of the portuguese crown, under the sovereignty of Portugal for a period of about 500 years, the islands were the stage for a great miscegenation, and cross-influences, giving rise to a culture and way of being Creole.

On 5 July 1975 the country gained its independence and since then has made a path for the development and has recorded several achievements on different fronts and is now a Middle Income Country.

Territory Physical Aspects

Thanks to its volcanic origin and insular nature, the archipelago of Cabo Verde (composed of ten islands nine of which inhabited) and the island of Santiago with 991 km², representing about 24.6% of the national territory, the largest island, the island of Santo Antão follows, with 19.3% of the territory. The smallest is the island of Santa Luzia, with about 35 Km² which represents around 0,9% of the territory of the country.

The highest point of the archipelago is on Fogo Island, where the peak of the volcano reaches an altitude of 2829 meters.

Table 1 - Location and Maximum Altitude of major elevations (mountain) of Cabo Verde

Islands	Designation (Mount)	Geographical situation		Predominant Orientation	Altitude (m)

Administrative Division of the Country

Inherited from the colonial period, the administrative division of the country, has seen some changes over the years especially after independence. It should be noted that in 1975 (the year of independence) in terms of administrative division, the country was divided into 14 municipalities, and from 2005 to date, comprises 22 municipalities, 3 on the island of Santo Antão (13.6 %), three on Fogo island (13.6%), 9 the island of Santiago (40.9%) and the remaining islands corresponding to one municipality (S. Vicente, Sal, Boa Vista, Maio and Brava).

Statistical Division (Census Districts/Enumeration Area)

In the context of the National Statistical System (NSS) and pursuing purely statistical purposes, the National Statistics Institute (INE) refers to the codification of administrative units of the territory, establishing from this hierarchy, smaller territorial units, building statistical division or Census Districts (CD) whose structure has a 6-digit code representing four hierarchical levels (1st level the islands, 2nd level the municipalities, 3rd level the Freguesia (civil parishes) and finally the CD's).

Currently (for statistical purposes) the country is divided into 948 CD's, about 51.9% on the Island of Santiago, followed by São Vicente (15.5%), Santo Antão (9.2 %) and Brava, the island with the lowest proportion of CD's (1.4%).

Table 5 – Number of Census Districts (CD) per island and municipality (2010)

Island	Municipality	No. CD's
Santo Antão	Ribeira Grande	38
	Paul	12

Transport Infrastructure

In terms of the road network in 2013, the country had about 1046.4 km long, 37% of which on the island of Santiago and 20.4% in Santo Antão Island. What is noticeable is that the distribution of the road network has a certain proportionality depending on the size of the surface of each island.

Currently, the country already has four international airports on the islands of Santiago, Boa Vista, Sal and São Vicente. The other islands, except Brava island, the island of Santo Antão and Santa Luzia, has an airport for domestic flights. Also, it should be noted that all the islands except the island of Santa Luzia (which is not inhabited) offer port infrastructure.

National Road Network

Table 6 - Extension and Classification of the National Road Network (2013)

Island	Extension (km)	Class (in Km)			Remaining (Without classification)
		1st Class	2nd Class	3rd Class

Population density

Based on population data (Demographic projections 2010-2030) it can be seen that population density has increased steadily, growing at around 5% between 2011 and 2015, reaching this last year, the value of 130, 13 inhabitants / km² at country level.

However, in 2015, there is the diversity of values for each island, where we can highlight the island of São Vicente as the most densely populated of Cabo Verde (356.9 inhabitants per km²) followed by Santiago Island (296.8 inhabitants per km²) and Sal (156.2 inhabitants per km²). In the national context, these islands are the ones with more pressure of population on the resources available.

Regarding the group of less densely populated islands (Boa Vista - 23.3 inhabitants per km²), (Maio - 25.9 inhabitants per km²) and (S. Nicolau - 36.2 Km²) the island of Boa Vista (which unlike the islands S. Nicolau and Maio, which have known, in recent years, a situation of stagnation or decline of the population) that has undergone, in recent years, rapid population growth and hence a significant increase in population density of 16.49 inhabitants per km² in 2011 to 23.31 inhabitants per km² in 2015 (an increase of 41.4% from 2011 and 2015) but remains the least densely populated island in the country.

It should also be noted the islands of Santo Antão, São Nicolau, Fogo and Brava that showed a reduction in terms of this indicator, the result mainly of the migration process (internal and external) that takes place in these Islands.

Table 9 - Population density (Inhabitants / km²) per island (2011-2015)

	Land area Km ²	Population Density				
		2011	2012	2013	2014	2015

Cities and Villages in Cabo Verde

With the entry into force of Law No. 77 / VII / 2010 (OB No. 32 of August 23, 2010) Cabo Verde, which until then had 6 cities (Praia, Mindelo, Assomada, São Filipe, Porto Novo and Santiago city of Cabo Verde), has then expanded to 24 cities, distributed according to the municipalities (except for Ribeira Grande and Sal with two cities each) i.e. 9 cities in Santiago, 4 in Santo Antão, 3 in Fogo, 2 in Sal, 2 in São Nicolau and 1 in each of the remaining islands.

Recently with the approval of Decree-Law No. 45/2015, 19 locations on all islands except S. Vicente, are now cities.

Table 10 – Identification and Designation of Cabo Verde Cities (2015)

Island	Municipality	Designation
Santo Antão	Ribeira Grande	Cidade de Ponta do Sol
		Cidade de Povoação
	Paul	Cidade das Pombas

Population and Social Conditions

Population

The population of Cabo Verde has grown continuously over the past 5 years. In 2015, it was estimated a number of 524,833 people residents, an increase of 6,336 people compared to 2014, corresponding to a growth rate of 1.23%.

The analysis by Municipality indicates that Praia and São Vicente have higher concentrations of the population, representing, in 2015, 28.9% and 15.4% of the total, respectively. Smaller population concentrations were registered in the municipalities of S. Nicolau de Tarrafal (1%) and Santa Catarina do Fogo (1.1%).

Population and Social Conditions

The natural growth rate (TCN) increased from 1.5% in 2011 to 1.4% in 2015. The average annual growth rate (CAGR) maintained the same value in 2015 (1.2%) presented in 2011. It is noted a significant difference for County; with the exception of S. Vicente, Sal, Boa Vista, Maio, Santa Catarina Santiago, Praia and São Domingos (which had a positive TCMA), all other municipalities had a negative TCMA. In terms of TCN all municipalities have grown positively, with the highest growth registered in Sal Island (2.2%) and the lowest growth in Ribeira Grande de Santo Antão (0.6%) and Ribeira Brava S. Nicolau (0.7%).

Life expectancy at birth for female individuals is higher than the male's. In 2015, life expectancy for men was 71.7 years, while for women was 79.9 years, indicating a difference of 8.2 years.

Age Structure of the Population

As for the age structure of the population by age (population according to age groups and sex), it appears that in 2015 the number of young people (people between 0 and 14 years of age) was 154,232 (29.4 % of total resident population). The group of 15 to 24 has 104,771 (20.0% of the total) and the estimated value for people aged 25 to 64 was 237,235 (45.2%). Regarding the elderly (people aged 65 or more years old), it was estimated a value of 28,597 (5.4% of the total).

Regarding the gender based structure, the weight of the female population was higher than the male population over these years, with the exception of 2015 in which male individuals accounted for half of the resident population.

The total dependency ratio has been decreasing continuously in the past five years, mainly due to the significant number of men and women of working age compared to the population of children and the elderly. In 2010 this indicator showed a value of 61.8% and increased to 53.5% in 2015. In terms of youth dependency ratio and the old-age dependency the situation is similar to the total dependency ratio, that is, both have been decreasing over time

Population and Social Conditions

Migrations

The foreign population in Cabo Verde in 2014 was 16,491 people, representing an increase of 46.7% compared to 2000 and a decrease of -7.4% over the same period in 2013. The municipality with the higher concentration of the resident population in 2014 was the municipality of Praia with an estimated 6,391 individuals. The island of Maio had less concentration that year.

Labour Market

The active population has declined in relative terms, at -3.8% 2012 to 2014. In absolute terms during the same period it increased from 225,819 to 217,158 individuals. The proportion of unemployed in the total labor force (unemployment rate) recorded slight decrease in these three years, going from 16.8% in 2012 to 16.4% in 2013 and to 15.8% in 2014. The unemployment rate for men (16.4%) in 2014 was higher than the unemployment rate among women (15.2%) and in urban areas (17.0%) higher than in rural areas (12.4 %).

Population and Social Conditions

The activity rate in Cabo Verde decreased from 60.1% in 2013 to 57.9% in 2014, representing a decrease of -2.2 pp. By gender, it appears that this rate is higher among men than among women. The municipality with the lowest activity rate in 2014 was São Lourenço dos Órgãos while Sal Island presented a higher value, around 81%.

In terms of area, it appears that from 2012 to 2014, this rate was higher in the urban areas than in the rural areas. In 2014 the rate was around 64.3% in urban areas, while in rural areas the rate was around 45.3%. Most municipalities display a higher activity rate in the urban areas compared to the rural areas, except for the municipalities of Porto Novo, S. Vicente, and Santa Catarina do Fogo.

As expected, the lowest activity rate is concentrated on individuals of the 65 age bracket (elderly) (10.9%) and the highest rate in individuals in the 35 to 39 age bracket (82.9%).

Unemployment

The unemployment rate in Cabo Verde has gone from 10.7% in 2010 to 15.8% in 2014, an increase of 5.1 pp. Compared to the year 2013, this rate decreased by -0.6 pp. The youth unemployment rate (14-24 years) continues to grow, increasing from 34.6% in 2013 to 50.8% in 2014, representing an increase of 16.2 pp.

Regarding the unemployment rate by gender it turns out that it is lower in females than in males. In 2014, unemployment among women was around 15.2% and among men was around 16.3%.

In the rural area unemployment rate was 12.4% and in the urban areas was 17%. However, when analyzed by municipality, it appears that Santa Catarina do Fogo is the municipality that showed the lowest unemployment rate in 2014 (5%), while the Ribeira Grande de Santo Antão had the highest rate of around 27.4%.

Unemployment rate decreases, but continuing high among young people

According to data from the Continuous Multi-Purpose Survey, Module Employment and Labour Market, conducted by the National Institute of Statistics, in 2014 the unemployment rate decreased 0.4 percentage points, reaching 15.8%. (In 2013 the rate was 16.4%).

Among young people (15-24 years) the rate remains high (35.8%) and more particularly affects young people in urban areas of all the islands of the archipelago. These manifest increasingly pessimistic about the job search. Unemployment affects almost similarly male and female gender (16.3% and 15.2% respectively).

There was greater disparity at the municipal level, Ribeira Grande (27.4%) and Paul (25.7%) (island of Santo Antão) and Praia, the country's capital (20%) are the most affected whereas, the lowest percentages were found in the municipalities of Santa Catarina do Fogo (5%) S. Salvador do Mundo (5.6%) and São Domingos (6.5%). - the latter on Santiago island.

This infographic summarizes in images and table the main results of the unemployment, in Cabo Verde (2014) for more information see: www.ine.cv

Social Protection

The number of members in the National Social Security Institute (INPS) increased from 169,290 people in 2010 to 197,991 people in 2014, an increase of 28,701 members and an increase of 17%. Compared to 2013, the number of members at INPS increased 1.9% in 2014. It is noted also that most members refer to "Family of insured and pensioners with open right", with 49.5% and "active Policy holders" with 36.6%.

When analyzed by gender, it appears that there are more INPS female members than men members. In 2014 there was a total of 99,536 female members and 98 456 male members, that is 50.3% and 49.7% of the total, respectively.

Poverty and living conditions

In 2007 the percentage of the poor, the population living below the poverty line (people living on less than \$ 49,485 per year) was 26.6% (QUIBB, 2007), the highest incidence was in the municipality of Santa Catarina do Fogo (59%) and the lowest in Sal Island (4%). According to the QUIBB 2007 data, the depth of poverty was 8.1%, while in urban areas the figure was 3.3% and in rural areas 14.3%. Regarding the intensity of poverty, this reached the value of 3.4% in 2007, in urban areas came to 1.3% whereas in rural areas reached the value of 6.3%.

Indicators and calculation method

Annual average growth rate - is the population variation observed in a given period of time, compared to the average population in this period, expressed as rate per 100 inhabitants.

$$TCMA = \frac{P_t - P_0}{[P_0 + P_t]/2} \times 100$$

P_0 - Population at inception point

P_t - Population at finishing point

Natural growth rate - is the natural balance observed in a given period, compared to the average population in this period, also expressed as rate per 100 inhabitants.

$$TCN = \frac{SN}{[P_0 + P_t]/2} \times 100$$

SN is the natural balance between the initial and final point

Life expectancy at birth - is the average number of years a person can expect to live at birth, if age mortality rates observed at the time remain.

Gender ratio - is the ratio of the actual male and female population, expressed as rate per 100 women.

$$RM = \frac{H}{M} \times 100$$

where H is the male population and M the female population.

Dependency ratio - the number of individuals under 15 years and the number of individuals aged 65 years or more existing for every 100 individuals between 15 and 64 years.

$$ID = \frac{Pop < 15 \text{ years} + Pop \geq 65 \text{ years}}{Pop 15 - 64 \text{ years}} \times 100$$

Total dependency ratio - relationship between the young and elderly (dependent population) and the labour force (adult), usually defined as the ratio between the number of people between 0 and 14 years along with people aged 65 or more and the number of people aged 15 and 64 years.

$$IDT = \frac{Pop < 15 \text{ years} + Pop \geq 65 \text{ years}}{Pop 15 - 64 \text{ years}} \times 100$$

Population and Social Conditions

Youth dependency ratio - the relationship between young people and the labour force, usually defined as the ratio between the number of people between 0 and 14 years and the number of people aged between 15 and 64 years.

$$IDJ = \frac{Pop < 15 \text{ years}}{Pop 15 - 64 \text{ years}} \times 100$$

Old age dependency ratio - the relationship between the elderly population and the labour force, usually defined as the ratio between the number of people aged 65 or more and the number of people aged between 15 and 64 years.

$$IDI = \frac{Pop \geq 65 \text{ years}}{Pop 15 - 64 \text{ years}} \times 100$$

Ageing index - number of individuals aged 65 or more years that exist for every 100 individuals younger than 15 years. That is, the relationship between old and young.

$$IDI = \frac{Pop \geq 65 \text{ years}}{Pop < 15 \text{ years}} \times 100$$

Longevity Index - the relationship between two groups of elderly people, one aged over 65 and the other aged over 75 years. Usually defined as the ratio between the number of people aged over 75 years and the number of people aged over 65 years.

$$IL = \frac{Pop \geq 75 \text{ years}}{Pop \geq 65 \text{ years}} \times 100$$

Migratory balance - the difference between the number of people entering and leaving the country during the year.

Poverty headcount index (P0) or poverty rate. If there are "n" people in the dependent population and that "q" among them are poor, or who have a level of annual consumption per capita "Yi" below the poverty threshold "Z" (ie "Yi < Z" "q" individuals), the poverty rate is H = q/n.

Poverty gap index (P1). This indicator is equal to the average of the differences between the poverty threshold and the consumption level of the poor, and is expressed as a percentage of the poverty threshold.

Severity rate or gravity index (P2). It takes into account not only the distance separating the poor from of the poverty line (deviation / poverty gap), but also the inequality among the poor. Assigns a greater weighting to more distant households of the poverty threshold.

Health

Health

This chapter of the yearbook covers the health sector indicators, a sector which has always deserved special attention from decision-makers in Cabo Verde, showing a distinct positive evolution in the various indicators, some presented in this yearbook.

Regarding the State General Budget (SGB), Cabo Verde applied on average from 2005 to and 2013, about 7.1% in the health sector. Although in absolute terms there has been a 26% increase in funding for health, it is clear that participation in the general Budget decreased by 0.47 percentage points from 2005 to 2013. From 2011 to 2013, the health budget decreased in absolute terms (-17%) although in relative terms, there has been an increase in 0.28 percentage points in the participation in the SGB.

Table 50 – State General Budget (SGB) and the Ministry of Health Budget (2005-2013)

Years	State General Budget (SGB)	Budget of the Ministry of Health (BMH)	% (BMH/GSB)
	Total (Millions in CVE)	Total (Millions of CVE)	
2005	35.285	2.670	7,57
2006	40.689	3.175	7,80
2007	40.154	3.210	7,99
2008	44.595	3.369	7,55
2009	52.003	3.438	6,61
2010	61.913	3.563	5,75
2011	59.422	4.055	6,82
2012	57.172	3.772	6,60
2013	47.322	3.361	7,10

Infrastructure and Resources Allocated to the Health Services

In terms of health infrastructure in 2013, the country has two central hospitals located in Praia and S. Vicente, 4 Regional Hospitals distributed amongst the municipalities of Ribeira Grande de Santo Antão, Sal, Santa Catarina and São Filipe and 28 health facilities, which in turn increased by 64.7% from 2009 to 2013. the Basic health Units are installed in all municipalities and are essential infrastructure in the implementation of health policy in the country.

With respect to human resources allocated to health facilities, Cabo Verde had 308 doctors and 594 nurses in 2013, representing an increase of 23% and 20%, respectively, compared to the year 2009. It should be noted that the number of doctors and nurses has consistently increased in the country, so that in 2013p.p, the ratio Doctor per 10 thousand inhabitants and nurses per 10,000 inhabitants would be at 6.01 and 11.6 p.p, respectively. São Vicente is the island / Municipality where both the doctor ratio per 10 thousand inhabitants as the ratio of nurses per 10,000 inhabitants are higher, of 10.73 and 19.2 p.p, respectively. Howeverp.p, there are notable regional differences p.p, as there are municipalities with limited coverage of doctors and nurses, for example, the municipality of São Salvador do Mundo, Ribeira Grande de Santiago and São Domingos.

Table 53 - Number of doctors, Ratio Doctor / 10,000 inhabitants, number of nurses and Ratio Nurses / 10,000 inhabitants (2009-2013)

Year	Population	No. Of Doctors	Ratio Doctor/ Inhabit.	No. Nurses	Ration Nurses/ Inhabit.

Data from 2013 indicate that, in national terms, many pregnant had not regularly received the tetanus vaccines. This situation becomes more critical as they advance in pregnancy, that is, in the first months of pregnancy the percentage of pregnant women who have received vaccines is significantly higher than that registered in the last months of pregnancy. This result although it had differences between the islands, demonstrate the same behavioral pattern in all municipalities of the country.

Table 56 - vaccination coverage of pregnant women receiving tetanus shot by municipality (2013)

Municipalities	Estimate Pregnant Women	Vaccination Coverage (%)

The number of births attended by trained professionals (doctors and nurses) in health facilities increased from 9,861 in 2009 to 9,745 in 2013, a decrease of 1.2% due to the reduction in the number of births. In the year 2013, about 92.3% of births were attended by trained professionals, however, in 2011 this figure was 98.7%.

Table 57 - Number of births attended by trained professionals (doctors and nurses) in health facilities (2009-2013)

Birth and Fertility

Indicators related to the Synthetic Fertility Index (SFI), Gross Birth Rate (GBR), Net Reproduction Rate (GRR) and Net Reproduction Rate Gross Birth Rate (NOR) showed a decrease in 2015 compared to the values observed in 2011. Sao Vicente Island had the lowest values (except in the case of the municipality of Ribeira Grande de Santo Antão, which showed a lower Gross Birth Rate (15%) while the Municipality of Santa Catarina do Fogo, has shown the highest values in the indicators, with the exception of the island of Sal with the highest Gross Birth Rate (24.9%) in 2015.

Fertility in Adolescence

In 2013, the proportion of young people who got pregnant early, showed a rate of 4.2% for adolescents aged 14 to 16 years, more pronounced in the municipalities of Santa Cruz (7.7%) and Paul (7, 5%). For the age group of 17 to 19 years the rate was 15.9% however the municipalities of Paul and São Domingos showed the highest values of 25.4% and 23.8%, respectively.

The pre-natal medical appointments coverage rate increased by 6.3 percentage points from 2009 to 2013, standing at 94.7%. Generally pregnant women attend on average about 4.4 antenatal medical appointments. The same trend was observed in relation to the coverage rate of postpartum medical appointments, which increased from 46.8% in 2009 to 48.8% in 2013. When analyzing the data broken down by municipality, one can see a clear regional heterogeneity in terms of attendance at postpartum visits.

The medical appointments of children under 1 year of age increased considerably, and from 2009 to 2013, increased about 29.2% and in 2013 stood at 98.3%. Also reported an increase in the average of the medical appointments, which went from 7.8 in 2009 to 9.9 in 2013, a variation of 26.9% in that period. In terms of municipalities, to point out that Ribeira Grande de Santiago stands out by the negative, with smaller numbers regarding this indicator.

Regarding the proportion of vaccinated children under 1 year of age, we note that in 2013, all vaccines have had a more than 90% coverage rate. Specifically, the values were 94% for BCG, polio 93.2% to 93.1% to Pentavalent and 90,70% to Measles. These data indicate the great effort that the country has made towards achieving universal coverage of vaccinated children.

Mortality

The Maternal Mortality Rate showed wide variation in values over the period 2004 and 2013. The lowest value was recorded in 2012, which reached 9.6 per 100,000 live newborns, but in 2009 this rate reached a maximum of 53.7. In 2013, this rate showed a value of 37.9 per 100,000 live newborns. In terms of Gross Mortality Rate one notes a downward trend, but with considerable variations during the period 2004-2013, during which the displayed average value was 5.19%.

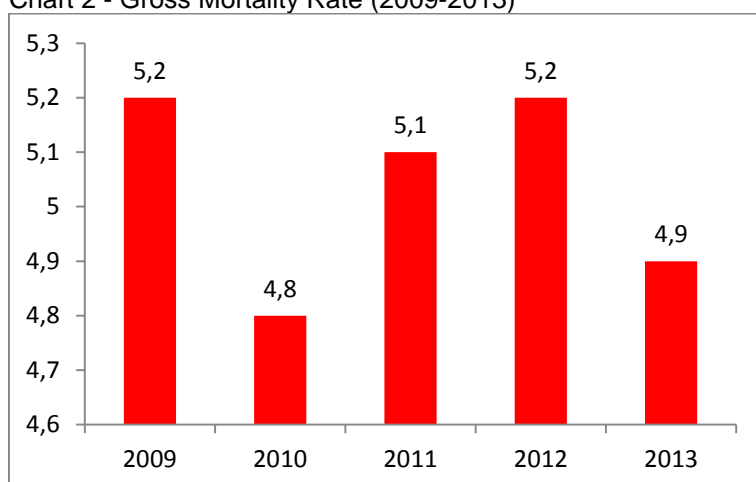

In 2013, there were 2,531 deaths, representing a mortality rate of 4.9%. Men accounted for 57% of deaths and also have a higher mortality rate (5.7%) compared with women (4.2%). Diseases of the circulatory system are the main cause of death (27.6%) both among men (23.6%) and women (32.9). It is further noted that the incidence of causes of death presents some differences in gender. Men are 21 times more likely to die due to mental illness and behavior, as well as in relation to death due to external causes, injuries and poisoning. Perinatal disorders were the main causes of infant mortality in 2013. Infant deaths occurred mainly in the early neonatal period (62.4%), late neonatal (12.4%) and post-neonatal with 25.2%. This indicator shows great disparities in regional terms.

Table 64 - Maternal Mortality Rate and Gross Mortality Rate (2009-2013)

Over recent years the country has regularly recorded malaria cases. In 2013 there have been 46 cases, with an incidence of 9 per 100 thousand inhabitants. This year there has been no death, however, in 2011, of the 36 cases reported, with an incidence of 7.2 per 100 thousand inhabitants, there were 3 deaths, indicating a mortality rate of 0.2 per 100 thousand inhabitants and a fatality rate of 8.3%.

Table 71 - Number of cases, incidence (per 100,000) deaths, mortality rate and mortality rate associated with malaria (2008-2013)

The number of tuberculosis cases has reduced significantly in recent years. From 2012 to 2013, the decrease was -39.3%. In 2013, 244 new cases of tuberculosis have been recorded, with an incidence of 55.6 per 100 thousand inhabitants. The prevalence was 61.9 per 100 thousand inhabitants and 15 deaths were recorded, representing a mortality rate of 2.9 per 100 thousand inhabitants. In 2011 there was a higher mortality rate (4.9 for every 100 thousand) on 25 deaths.

The municipality of Paul recorded, in 2013, higher incidence rates (171) and prevalence (187) for tuberculosis. Also, the island of Maio showed high values in relation to these two indicators, compared to the other municipalities of the country. It should be noted that the Municipality of Mosteiros did not register any cases in 2013.

The HIV detection rate from 2009 to 2013, recorded an increase of 21.6 percentage points and stood in 2013 at 87.3 per 100 thousand inhabitants in 2013, and in the same year, 447 new cases have been identified. Mortality also increased over the same period, with a value of 16.4 per 100,000 inhabitants in 2013, corresponding to 84 deaths registered that year.

It can be seen that the reported cases of HIV infection are more frequent in the age groups from 25 to 50 years. Women show a higher percentage of lower ages (15 to 34 years), mainly due to screening tests on a regular basis for routine medical prenatal appointments, while men show higher percentage from 35 to 54 years.

Table 74 – HIV detection rate and mortality (2009 – 2013)

Year	Population	New cases	Detection rate (per 100.000)	Deaths	Mortality rate (per 100.000)

In terms of sales of medicinal products, the country recorded in 2013, 71 medicines sales units spread across all municipalities. This year there were also about 147 private health facilities. Also, more than 227 million Cape Verdean escudos were spent in terms of public spending on medicine products, highlighting the Municipality of Praia and São Vicente, both accounting for 37.2% the total number of expenditures.

Indicators

Designation	Calculation
Child mortality rate (MDG)	$\frac{\text{No of child deaths under 1 year of age} \times 1.000}{\text{No of live births}}$
Early Neonatal Mortality Rate	$\frac{\text{No of child deaths aged 0 to 6 days of full life} \times 1.000}{\text{Total number of live births}}$
Late Neonatal Mortality Rate	$\frac{\text{No of child deaths from 7 to 27 days of full life} \times 1.000}{\text{Total number of live births}}$
Perinatal Mortality Rate	$\frac{\text{Sum of the number of fetal deaths (22 weeks gestation or more) and child deaths aged 0-6 full days of life} \times 1.000}{\text{No of total births (live births plus fetal deaths of 22 weeks and over gestation)}}$
Post-neonatal Mortality rate (late infant mortality rate)	$\frac{\text{No of child deaths from 28 to 364 full days of life} \times 1.000}{\text{No of live births}}$
Youth Mortality Rate	$\frac{\text{No of child deaths aged 1 to 4 years of age} \times 1.000}{\text{Total number of children aged 1 to 4 years old}}$
Under five mortality rate (MDG)	$\frac{\text{No. of children deaths under 5 years} \times 1.000}{\text{Total number of live births}}$
Maternal Mortality Rate (MDG)	$\frac{\text{No of female deaths by direct obstetric causes} \times 100.000}{\text{Live births}}$
Gross Mortality Rate or Overall Mortality Rate	$\frac{\text{Total number of residents deaths} \times 1.000}{\text{Total resident population}}$
Gross Birth Rate	$\frac{\text{Total number of resident live births}}{\text{Total resident population}} \times 1.000$
AIDS Incidence Rate	$\frac{\text{No of new AIDS cases, confirmed in residents} \times 100.000}{\text{Total resident population}}$
AIDS Prevalence Rate	$\frac{\text{Total number of AIDS cases on record (cumulative)} \times 100.000}{\text{Total resident population}}$
AIDS Mortality Rate	$\frac{\text{No of deaths by AIDS}}{\text{Total resident population}} \times 100.000$
Tuberculosis Incidence Rate (MDG)	$\frac{\text{No. of new cases of tuberculosis (all forms)} \times 100.000}{\text{Total resident population}}$

Indicators

Designation	Calculation
Tuberculosis Prevalence Rate (MDG)	$\frac{\text{Total number of tuberculosis cases on record (all forms)}}{\text{Total resident population}} \times 10.000$
Mortality rate by Tuberculosis (MDG)	$\frac{\text{No. of deaths of residents by tuberculosis}}{\text{Total resident population}} \times 100.000$
Malaria Incidence Rate (MDG)	$\frac{\text{No. of new malaria cases}}{\text{Total resident population}} \times 100.000$
Malaria Mortality rate (MDG)	$\frac{\text{No. of malaria deaths}}{\text{Total resident population}} \times 100.000$
Malaria Mortality Rate	$\frac{\text{No. of malaria deaths}}{\text{Total malaria cases}} \times 100$
Coverage rate of first-time medical appointments in the 1st year of life	$\frac{\text{No. of first medical appointments given to children under one year of age}}{\text{Total of children under one year of age}} \times 100$
Coverage rate of at least 1 prenatal medical appointment (MDG)	$\frac{\text{No. of first medical appointments attended by pregnant women}}{\text{Total estimated pregnant women}} \times 100$
Coverage rate of postnatal medical appointments	$\frac{\text{No. of first medical appointments attended by women in the postpartum}}{\text{Total estimated pregnant women}} \times 100$
Proportion of births attended by trained Health Personnel (ODM)	$\frac{\text{No. of deliveries assisted by experts (physicians, nurses and midwives)}}{\text{Total number of births}} \times 100$
Rate of fully vaccinated children (Vaccination coverage in the First Year of Life)	$\frac{\text{No. of children under one year of age with the basic scheme of complete vaccination}}{\text{Total of children under one year of age}} \times 100$

Education

Education

Education has always been an important pillar for growth and sustainability of the economy of Cabo Verde. Successive governments since independence have spared no effort so that the country can currently boast a remarkable reputation of "success in sub-Saharan Africa" in relation to education indicators.

Challenged by the United Nations, the country has met all the Millennium Development Goals in the area of education and currently, education indicators clearly show all deployed efforts.

This yearbook theme aims to present a framework concerning the level of education, the literacy rate, the number of establishments, industry professionals, school enrollment, school dropouts and repetition rates, which are the main indicators that allow measuring the development of the education sector.

Population Education Level

The education level is an important indicator to measure education in the country. 2014 data indicate that in terms of the percentage of the population that never attended school, there was a reduction of 4.6 percentage points from 2010 to 2014. In 2014 only 8.3% of the population declared never attended school. Similar results can be found in terms of the percentage of the population that is attending primary, secondary and higher education because in 2014 the figures indicate that the population attending primary school increased by 3.3 percentage points, as well as the population attending secondary and higher education, with an increase of 7.6 and 3.7 percentage points from 2010 to 2014, respectively. Regarding Pre-school, there is a decrease, taking into account that only 3.4% of the population was attending this level of pre-school education, compared with the 4.6% recorded in 2010.

The data also indicate that differences remain in terms of gender and living environment of the population, ie comparing male and female gender, it appears that in relation to the proportion of people who never attended an educational institution, women are at a disadvantage compared to men because women rate values in these conditions is more than double that of men. The same applies to the rural population, where the rate of 12.3% is well above the 6.2% rate recorded in the urban environment.

These differences are not so evident in relation to the percentage of the population enrolled in primary and secondary education, however, it shows that the rural population has higher rates in terms of population attending preschool and primary education.

The Municipality of Ribeira Grande presented the highest percentage (14.6%) of the population that never attended school.

Table 78 - Nível de instrução da População, por Sexo, Meio de Residência e Concelho Population education level, by gender, area and Municipality (2010-2014)

Literacy rate

The literacy rate for the population over 15 years of age indicates that in 2014 there was, in general, an increase of 3.7 percentage points when compared to 2010. The literacy rate was 86.5% in general and specifically, men had a rate of 91% and women 82%. It should be pointed out that the female population has had a higher relative increase, recording a value of 4.7 percentage points higher than in 2010. These results indicate an effort to reduce disparities in access to education and can be best evidenced when analyzing data regarding the youth literacy rate (aged 15 to 24 years) in 2014 which increased from 2010 to 2014. Important qualitative information should be highlighted, ie rates are similar for men and women, reflecting the prior implemented effort to achieve greater gender equity, both regarding area and education.

Table 79 - Literacy rate of the population (15 and over) and Youth Literacy Rate (15-24 years) according to gender, by residence and municipality (2010-2014)

In the year 2014 were registered about 526 educational establishments/pre-school, 420 primary school units and 50 secondary schools. The tables show an increase in 26 pre-school units, a decrease of 7 primary education units and an increase of 5 secondary schools from 2010 to 2014. This dynamic led to an increase in hiring 158 teachers for preschool, reduction of 44 teachers in primary education and an increase in hiring teachers for secondary education.

The data indicate that in relation to students enrolled in 2014 there were about 22,144 students in preschool, 65,954 students attending primary school and about 52,427 students enrolled in secondary education. These figures were the result of an increase in 512 new students in preschool (increase of 2.4% compared to 2010), a decrease of 5,180 pupils in primary education (7.3%) as well as a reduction of about 976 students in the secondary level (1.8%) in the period from 2010 to 2014.

Schooling rate

The gross enrollment rate for primary education was 105.4% in the year 2014. This figure although lower than what had been recorded in 2010 indicates that enrollments offer in primary education is sufficient to meet the demand for registration of the age group for primary education. With regard to secondary education, the gross enrollment rate despite having increased compared to 2010, showed a value of 82.9% and because it is less than 100%, it shows dissonance between the demand and supply of vacancies for students from secondary education age group. The lowest value was recorded in the municipality of Santa Catarina do Fogo, where this indicator showed a value of 61.6%.

* Indicators were updated only at national level

The net enrollment rate showed a value of 0.93 for primary education and 0.7 for secondary education in 2014. These figures indicate that for primary education the value is high, however, with regard to secondary education, although having increased by about 5 percentage points, it is noted that 70% of young people are enrolled in the education level of their age group.

Drop out and Failure

In 2014, the dropout rate in primary education was 1.1%, an amount that is 0.6 percentage points lower than what was recorded in 2010. The drop out has higher incidence among males both in primary and secondary education.

The dropout rate registered in secondary education was 5.8% and men (6,9%) showed a slightly higher rate than women (4,8%). It should be noted that there was, in 2014, a reduction of about 2 percentage points in the dropout rate in secondary education, when compared with 2010 figures. In 2014, The municipalities of São Filipe (13%), Paul (11.1%), Brava (11%), Boa Vista (10.2%) and Tarrafal de S. Nicolau (10.1%) presented the higher values in terms of dropout rate in secondary. The municipalities of São Domingos (3.1%) São Vicente (3.5%) and Praia (3.9%) have showed the lowest values. The Boavista Island showed higher values in terms of dropout for secondary education.

Failure

Regarding the failure rate, it is noted that although having decreased from 24.9% in 2010 to 24% in 2014 the failure rate in the secondary still represents a high value. Failure to pass the secondary affects more men (27.1%) than women (21.1%). In primary education around 8.6% of students have failed. The failure occurs more among men (10.8%) than among women (6.2%). The Municipality of Santa Catarina do Fogo presented the highest failure values in terms of primary education, while for secondary education it was the Municipality of Santa Cruz.

Economy and Finance

In this chapter of the yearbook, are presented the indicators of the economy and finances. The data that are presented in detail allow identifying the structural changes in the country while more information is made available on the dynamics observed in the economy, particularly in relation to economic growth, as measured by the evolution of the Gross Domestic Product (GDP). Other indicators related to investment, savings, business dynamics, inflation, monetary sector, banking indicators and the country's external accounts are presented in various tables and highlight the evolution of the national economy.

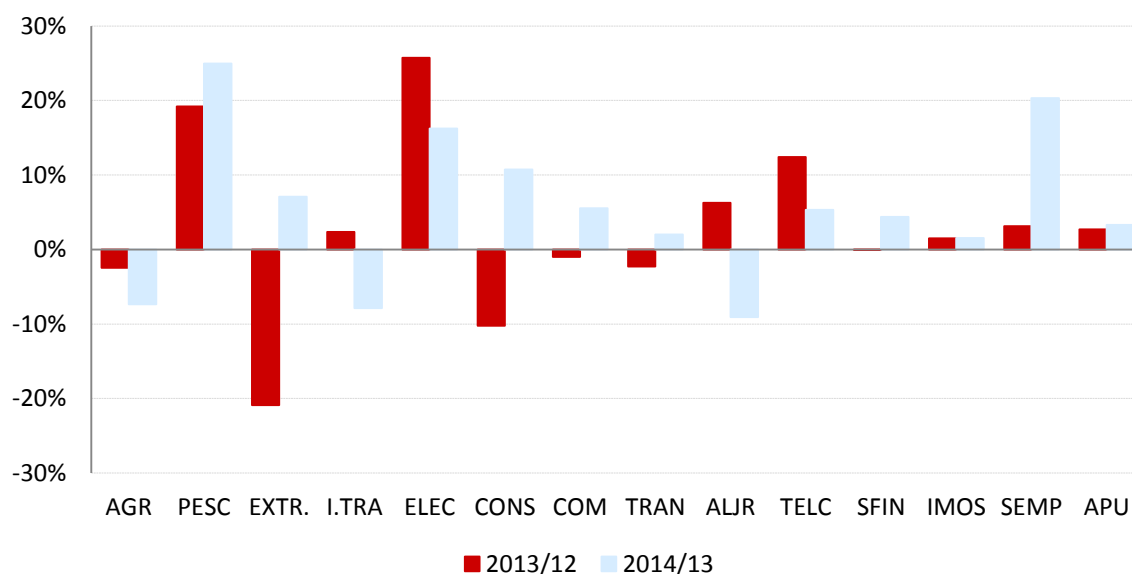

National Accounts

Annual national accounts

Taking into account the decline in inflation, real GDP was higher than the nominal GDP in 2014, whereby the annual rate of change was 1.8% for real GDP, against 1.3% recorded for the nominal GDP this year.

This growth is due mainly to the positive evolution of the activity sectors, fishing (24.9%), extraction (7.1%), electricity (16.2%), construction (10.7%), trade (5.6%), telecommunications (5.3%), Business Services and Public Administration (20.3%).

Chart 3 - Accumulated Variation (%) of the GAV in volume of sectors of activity, (2013-2014)

The data indicate that in 2014 the GDP at market prices continued the registered growth trend in recent years and the period from 2010 to 2014, grew by 11.8%. This growth is largely due to the excellent performance of the tertiary sector, which has increased by 16.6% in the same period.

In terms of contribution to nominal GDP it should be noted that in 2014, the tertiary sector has contributed to 63.8%, while the primary sector and the secondary have contributed to 8.0% and 16.2%, respectively.

When analyzing the tables of the contribution of different sectors in the Gross Value Added (GVA), there is a major structural change in the primary and secondary sector that have decreased their participation in the VAB composition, in favor of the tertiary sector, which contribution has increased by 2.3 percentage points from 2010 to 2014. As shown in the table below, the last year of the series, this sector reached 72.4% of GVA.

The *per capita* GDP of Cabo Verde, increased during the period 2010 to 2012, 5.9%. During this period, the islands of São Vicente, São Nicolau and Sal had negative growth rates of GDP per capita, the most significant drop observed on Sal Island (8.2%).

The highest values of GDP *per capita* were recorded on the islands of Boa Vista and Sal, where tourism has greater dynamism. The GDP per capita of 697,162 escudos found on the island of Boa Vista in 2012 is more than triple the amount recorded in Brava island that year. This indicates that there are significant regional differences in economic growth in the country.

Monetary and Financial Sector

When analyzing the evolution of bank deposits it can be seen that there was an increase of 33.3% in the period from 2010 and 2014 being the increase of savings deposits of emigrants one of the contributing factors, which in the same period increased by 39.7% .

Table 109 – Bank deposits (2010-2014)

Year	Deposits			
	Total	Term and savings deposits of which:		Other
		Emigrants	Residents term deposits	
2010	99.481	33.608	24.357	41.516
2011	98.560	36.969	23.786	37.805
2012	106.854	40.305	25.992	40.557
2013	121.889	43.632	31.271	46.986
2014	132.638	46.944	33.415	52.279

Source: Bank of Cabo verde

In terms of borrowing, it is noted that, although having grown less than the deposits in the period 2010-2014, credit has increased 23.4% and most of it, about 77.1% in 2014, as credit to the economy.

Table 110 - Bank credit (2010-2014)

Year	Net Domestic Credit		
	Total	GG Net Credit	Credit to the Economy
2010	100.330	16.848	83.481
2011	112.326	18.992	93.334
2012	116.452	22.851	93.601
2013	120.795	25.285	95.510
2014	123.782	28.357	95.425

Source: Bank of Cabo verde

From 2010 to 2014, short-term interest rates (up to one year) decreased by 0.5 percentage points for credit and 0.2 percentage points for deposits. As for the period between 1 and 2 years there was an increase of 1.4 percentage points for credit and 0.6 percentage points for deposits. This resulted in an increase of the *spread* (the difference between the interest charged on loans and the interest paid on deposits) for contracts of 1 to 2 years, by 0.8 percentage points, compared to contracts up to one year there was a reduction of 0.3 percentage points from 2010 to 2014.

Table 111 – Interest rates (2010-2014)

Year	Interest rates				
	Credit		Deposits		
	181 days - 1 year	1 - 2 years	181 days - 1 year	1 - 2 years	Emigrants (181 days - 1 year)
2010	9,0	10,1	4,5	4,1	4,1
2011	9,5	10,1	4,2	4,7	4,2
2012	9,3	10,0	3,8	4,9	3,7
2013	9,0	10,4	4,3	4,9	4,2
2014	8,5	11,5	4,3	4,7	4,7

Source: Bank of Cabo Verde

Observation: From February 5, 1996 interest rates were fully liberalized. Before liberalization, the rates used in emigrant accounts (CVE) were equal to the rates of residents plus a margin of 0.5%

In the period 2010-2014, the net foreign assets increased by 49.8% as well as the money supply, which has increased by 30.8% in the same period.

Table 112 - Monetary Survey, (2010-2014)

GG – General Government

Observation: By December 2009, the Monetary Survey integrated the information of the five bank financial institutions. From December 2010, in addition to the central bank's information became to include the information from seven of the eight commercial banks that are part of the national banking system. However, from December 2012, it moved to cover data from all banking institutions of the system.

Workers' remittances have always played an important role in economic and social stability of the country. The data indicate that, from 2010 to 2014, shipments increased about 33.4% and one can still see that Portugal accounts for 32.4% of total remittances received in 2014. With the exception of Spain, all other countries showed a significant increase in shipments during the years 2010 to 2014. In this period, remittances from Europe, on average, accounted for about 81.6% of the total.

National ATM Network Activity

The banking sector has shown a diversification in terms of services provided to customers. There is the decentralization of banking activities through greater use of the debit card. The data indicate that the number of credit transactions and has increased considerably and from 2010 to 2014 there was an overall increase of 95% in transactions and 57.9% in terms of financial turnover, with particular emphasis on shopping movements at the POS. In fact, 92.4% of transactions with cartão²⁴ in 2014 were for withdrawal or payment at POS. Transactions with international card also increased considerably from 2010 to 2014.

Although the number of banking institutions has not registered increase since 2010, it is noticed that there was an increase in the number of sub-branches (8.6%), of the ATMs (21.3%) and POS terminal number (117.8 %). Means and payment instruments showed a positive development from 2009 to 2013. Virtually all means of payment increased transaction volume as well as the amounts involved.

Economy and Finance

The balance of payments registers all transactions between residents and non-residents. Cabo Verde has a structural deficit in the current account, mainly due to the significant number imports of goods that even with the positive balance in the services account (due to the dynamism of tourism) and current transfers balance, is not enough to be compensated.

The capital and financial balance that is the channel through which the external financing of the economy is processed, experienced a positive evolution, mainly by increasing Foreign Direct Investment.

Table 119 – Balance of Payments, (2005-2014)

Indicators and definition

Balance of payments consists of the accounting records of financial flows on all transactions of that country with the rest of the world for a certain period of time (usually a year).

Trade balance records all transactions in goods between residents and non-residents of that country processed over a period of time (usually a year)

Final consumption is the value of all individual goods and services purchased added to the value of collective services provided by government to the community or a large community groups.

Actual final consumption of of public administrations are the expenses incurred by the government of a collective nature services.

Actual final consumption of households are the consumption expenditures of the households consumption held by social transfers in kind from government units or non-profit institutions serving households.

Exports of goods and services are goods sold (valued at FOB prices ie including only the cost of domestic marketing to the port of exit of the goods) and services provided to non-residents.

Gross Fixed Capital Formation (GFCF) covers the acquisitions less disposals made by residents producers of fixed assets during a given period and certain additions to the value of non-produced assets realized by the productive activity of production or institutional units.

Imports of goods and services are purchased goods (valued at CIF prices, ie including the price of goods, the cost of insurance and freight) and services provided by the countries that make up the rest of the world.

Taxes are compulsory, unrequited payments, in cash or in kind, made by institutional units to government units.

Taxes on production and imports are taxes, fees and contributions paid by production units, on the basis of established legal norms, and that focus on the production, marketing, import and export of goods and services and the use of inputs.

Taxes on products taxes, fees and contributions levied on goods and services when they are produced or imported, distributed, sold, transferred or otherwise made available by their owners.

Taxes on production are taxes that sustain the economic agents due to its activity, regardless of the amount or value of goods and services produced or sold.

Income tax is the annual tax amount that applies on income, profits and actual or presumed capital gains of individuals, societies, families or private administrations. They include taxes on property, land or real estate, provided that they are used as estimating basis of the income of their owners

Value added tax is a tax on goods and services collected in stages by companies and ultimately, it is fully charged to final consumers.

Financial intermediation is the activity in which an institutional unit acquires assets and incurs on its own account in liabilities through financial market transactions. The assets and liabilities of the financial intermediaries have different characteristics, as in the process of financial intermediation, the funds are transformed or repackaged with the maturity, scale, risk, etc.

Current prices are the prices of production or acquisition at the time of the transaction.

Gross domestic product at market prices is the sum of gross value added of the various institutional sectors or areas of activity, increased taxes less subsidies on products. It can be defined in three ways: 1) GDP mp is equal to the sum of gross value added of the various institutional sectors or fields of activity, plus taxes less subsidies on products.

Saving is the part of disposable income that is not allocated to final consumption expenditure. If saving is positive, non-spent income is used for the acquisition of assets or reduction of liabilities. If saving is negative, certain assets are liquidated or certain liabilities increase.

Gross national income is the gross domestic product plus net income of inputs sent (received) to (from) the rest of the world.

Gross National Income (GNI) at market prices represents total primary income receivable by resident institutional units: employee compensation, taxes on production and imports less subsidies, property income (receivable less payable), exploration surplus (gross or net) and mixed income (gross or net).

Household savings rate measures the portion of disposable income that is not used in final consumption, which is calculated by the ratio of gross saving and disposable income, adjusted by the change in net equity of households in pension funds.

Transfers are transactions in which an institutional unit provides a good, service or asset to another institutional unit without receiving any goods, services or assets in return.

Current transfers are not classified as transfers of capital, they directly affect the available income and can influence the consumption of goods and services.

Capital transfers are transfers in kind or in cash, in which the ownership of an asset is transferred from one institutional unit to another or when the cash is transferred to enable the receiver to acquire an asset.

Value added is the value that the activity adds to goods and services consumed in the production process. It is the contribution to gross domestic product by the various economic activities, obtained by the difference between the value of production and intermediate consumption absorbed by these activities.

Company is an entity (corresponding to a legal unit or the smallest grouping of legal or institutional units) provided organizational and decision-making autonomy in the allocation of resources to their production activities, performing one or more activities in one or more locations.

Main economic activity means the activity that is the most important in all the activities carried out by the economic activity. The determination of economic activity is based on the following criteria:

1. Turnover;
2. Service staff;
3. Production.

Company number of employees means the number of people who, in this period, effectively participated in the company's activity, regardless of the bond they have, whether or not they receive a wage.

Price Index Consumer

The Consumer Price Index (CPI) is an indicator that is designed to measure changes over time in the prices of a set of goods and services considered as representative of the resident population consumption structure in Cabo Verde. The CPI is not, therefore, an indicator of price levels registered between different periods but rather an indicator of its range. The current consumption structure series of the CPI (2007 = 100) as well as the goods and services which are the indicator of the basket were extrapolated based on the Survey of expenses and revenue Families conducted from October 2001 and October 2002. CPI is classified into twelve classes of products (Individual consumption rating by Objective) and the compilation results from the aggregation of three regional price indexes (Santiago, São Vicente and Santo Antão). More information about this series of the CPI may be obtained by consulting the methodological note of the indicator: "Price Index Consumer Base 2007 (IPC07) Methodology", Directorate of National Accounts, Economic Statistics and Services, Prices Division Cabo Verde's Institute for Statistics, available on the Portal of the National Statistical System through the address www.ine.cv ou www.statline.cv.

Foreign Net Assets include gross external assets and external liabilities of short, medium and long term of the Bank of Cabo Verde and depository corporations.

The Domestic Net Credit includes:

- **The net credit to the Government** includes: Gross credit to the Central Government, including the consolidation of Securities and Financial Mobilization deducted from loans and deposits of the central governments, and local institutions and autonomous services and the National Social Security Institute (INPS).
- **Credit to Economy** comprises loans granted to private non-financial companies by depository corporations to non-financial public companies, on individuals, other non-monetary financial institutions and non-financial non-profit institutions serving households.
- **Other Net Assets** register: other assets and liabilities; capital accounts, interbank flows; value fluctuations.

Money supply (M2) = M1 + Quasi Monetary Liabilities

Monetary Liabilities (M1) includes: notes and coins in circulation (by the public), currency issuance minus cash in depository corporations) and demand deposits of private non-financial corporations, nonfinancial public enterprises, individuals, immigrants, other non-monetary financial institutions.

Quasi Monetary Liabilities (Quasi Currency) - savings deposits and term deposits in national currency of residents, including immigrants, time deposits in foreign currency from emigrants, foreign currency deposits from residents, public debt securities repurchase agreements, deposits for collateral operations and checks and orders to pay.

The interest rates charged on passive and active operations of commercial banks are effective interest rates calculated as a weighted average of the rates by the corresponding amounts. They are sorted by type and term and are expressed as a percentage. This information is reported to the Bank of Cabo Verde on a monthly basis by commercial banks.

Interest rates on Treasury securities, expressed as a percentage, result from a weighted average of the placement rates of securities in the primary market.

Industry, Trade and Services

This chapter consists of statistics relating to trade, industry, tourism, transport, information and communication science and technology. Each theme key indicators will be presented, it is to enable a deeper and more detailed insight into the characteristics of each sector and to enable a finding on the evolution of the most relevant indicators.

Industry

Of the 916 industry companies in 2013, 18.9% work in the field of food industries and 26% in the manufacture of furniture and mattresses. With regard to service personnel, food industries employ about 33.3% of all staff who work in the industry. Companies from the food industries and industries of beverages contribute 39.9% and 20.1% respectively in the total turnover of the industrial activity.

Tourist demand

During the reporting period, the number of guests in the year 2014 amounted to 539,621, representing an increase of 41.3% compared to 2010. In 2014, the hotel have accommodated 86.8% of the total. Guests who visited Cabo Verde this year came mainly from the United Kingdom (18%), Germany (12.8%), France (11.5%) and Portugal (11.1%). It is further noted some diversification of guests, the fact that "other countries" have significantly increased their contribution in terms of guests and in 2014 they already accounted for 20% of the total.

Tourism Satellite Accounts

Tourism has given a major contribution to the economic growth of the country, as evidenced by the evolution of the tourism GDP that grew between 2011 and 2014, 17.9% higher than the value of total GDP growth (5.1%), to point out that tourism has a clear contribution to the national economy growth.

The Tourism contribution to the country's GDP rose from 18.71% in 2011 to 20.97% in 2014, but in 2013 the contribution was 21.91%, definitely showing that it is an important sector for the country. It may also be mentioned the fact that tourism has contributed about 20.1% for the total of jobs in the country in 2013.

Total	647.379	817.608	773.869	760.267	797.687

Source: ENAPOR

Regarding the movement of goods, it is noted that in 2014, most of the goods moved in ports is associated with landing (79.9%), consistent with the value structure of the national economy, heavily dependent on imported goods. Overall, the goods movement had a slight increase of 4.2% from 2010 to 2014, however, most notably the embarkation movement which increased 30.7% while disembarking decreased by 0.8% in the same period.

Air transport

The movement of passengers in airports has increased by 5.7% from 2010 to 2014, however, in this same period, the movement of passengers on domestic flights increased by about 30.1% and international flights showed a decrease of 17.8%. Similar situation can be seen in relation to aircraft movement in the same period. It may be noted an overall increase of about 15.7%, with a decrease of 34.4% in domestic flights and 87% on international flights. Considering cargo and mail movement, it is noticed a decrease of 9.2% and 3.4%, respectively, from 2011 to 2014.

Families and access to ICTs

The table on the proportion of households with access to fixed telephone service and mobile telephone service indicate that in 2014, 31% of households had access to landlines and 65% said that there was at least one mobile phone in the household. These numbers also indicate that there was a decrease, compared with the 2012 values in which 40.6% of households had landline and 88.6% had at least one mobile phone at home. The data also indicate the existence of disparities in relation to urban and rural areas, that is, while in urban areas in 2014, 32.7% of households had landline and 71.9% had mobile phone in rural areas only 27.5% of households had access to landlines and 52% had mobile phone.

Industry, Commerce and Services

Access to the media, is one of the requirements to improve the quality of life of the population. Considering the tables on the proportion of households according to access / ownership of TV, cable TV, Computer, Tablet / Ipad and Internet access it can be seen that in 2014, 77.4% of households had TV, 9.4 % had cable TV, 31.9% had a computer, 11.2% had a tablet / Ipad and about 32.2 had internet access. The tables show that there are disparities between rural and urban areas, however, in terms of municipalities, the disparities are most evident, with large differences in terms of access to the media.

Table 172 - Proportion of households according to access / ownership of TV, cable TV, Computer, Tablet/ Ipad and Internet access per Residence and Municipality (2012-2014)

	Television	Cable TV	Computer	Tablet / Ipad	Acess to internet

Industry, Commerce and Services

In 2014, the proportion of the population aged 10 years or more who has used a computer (laptop, desktop, Ipad or tablet) in the last three months was 36.8% overall; however, in urban areas, the percentage rises to 46% and in rural areas drops to only 19%. In the municipality of Ribeira Grande the percentage is the lowest, where only 16.5% of the population aged 10 years or more has used computer in the last three months, contrasting with the Sal Island, where the percentage amounted to 54.4%.

The results was always practically equal in terms of the proportion of the population aged 10 years and over who has used the Internet in the last 3 months. Noteworthy that in 2014, about 37.1% has used internet and the discrepancy occurs both in rural and urban areas as well as for the different municipalities. Only 13.2% of the population of Ribeira Grande had access to the internet while in Sal 58.4% of the population had access to internet in the last three months.

Concepts

Turnover proceeds from the sale of goods and services, without deduction of discounts

Microbusiness

business unit employing up to 5 workers and or having a monthly gross turnover not exceeding five million escudos.

Small business

Business unit that employs from six to ten employees and or having a volume of gross annual turnover exceeding five million escudos and less than ten million escudos.

Hotel establishments are intended to provide accommodation for remuneration, with or without meals and other services. Hotel establishments of interest to tourism **are classified**, in regulatory terms, in the following groups and categories:

Group 1: five, four, three and two-star hotels;

Group 2: four, three, two and one star guesthouses;

Group 3: four and three-star B & B;

Group 4: four, three and two-star Hotels – apartamentos;

Group 5: Luxury Holiday Village, 1st and 2nd.

Hotels

For an establishment to be classified as a hotel it should occupy an entire building or a part of it, completely independent, making its facilities a homogeneous whole and have access to the floors for the exclusive use of customers.

To be classified as a hotel, the establishment must have at least twenty rooms.

Guesthouses

Guesthouses are establishments, that due to facilities, equipment, general appearance, location and capacity, do not meet the standards set for classification as a hotel and comply with the requirements of the provisions laid down by the regulations on the industry and the like.

For an establishment to be classified as a guesthouse, it should occupy the whole of a building or building unit and have at least ten rooms.

Residential establishments

Hotels and guesthouses that only offer hotel service and breakfast will be classified as residential.

Hostels

Hostels are located hotel establishments outside urban centers, the building itself, offering good comfort and convenience conditions, designed to provide tourists hotel service and, if necessary, food.

Apartments - Hotels

Apartments – Hotels are establishments consisting of a set of furnished and serviced apartments, installed in the building itself and exploited as a hotel.

Holiday Villages

Are classified as tourist villages establishments consisting of a set of interdependent and adjacent facilities, the subject of an integrated tourist operation intended, for remuneration, to provide its hotel users, together with ancillary services and additional equipment and support.

Hotel capacity

Maximum number of individuals that establishments can accommodate at a given time or period. The hotel is determined by the number of beds, double beds count as two beds. This capability is present or available, as they do not consider the closed establishments.

Overnight

Stay in an establishment that provides lodging considered for each individual, and for a period from 12 hours from one day and 12 hours of the next day.

Guest

Individual with at least one overnight in a hotel establishment. Even if it is the same establishment, the same individual is counted in the reference period as many times as periods remaining there (new registrations).

Occupancy rate – bed

Indicator to assess the average hotel capacity used during the reference period. Corresponds to the ratio between the number of overnight stays and the number of beds used, double beds are considered two beds.

$$\text{O. R. (bed)} = \frac{\text{Number of overnights in the reference period}}{\text{No. of beds} \times \text{Number of days in the reference period}} \times 100$$

Average stay per hosting

Ratio between the number of overnight stays and the number of guests that originated these overnights.

Visitor

Any person traveling to a place other than his/her habitual residence, for a duration less than 6 months, since the main purpose of the trip is not to engage in gainful activity in the place visited.

Tourism

Activities carried out by individuals during their travel and stay in places outside their usual environment for a period of less than one consecutive year for leisure purposes, business or other reasons.

Tourist

Visitor who stays at least one night in a collective or private hotel situated in the place visited.

Personnel employed

People who in the reference period effectively participate in the activity of the company / establishment, regardless of the bond they have. It includes persons temporarily absent during the reference period for vacation, maternity, labor dispute, training, as well as disease or duration of a work accident equal or inferior to a month. It also includes employees of other companies who are working in the company / establishment, and then directly paid.

It excludes employees complying with the military service on unpaid leave scheme, holders of political office (councilors and deputies), absent for illness or duration of a work accident exceeding one month, as well as workers with ties to the company shifted to other companies, and being directly paid on those.

Paid employees

Person who actively participates in the company's activity / establishment receiving on this account a fixed sum of money and or pre-determined basic commodities.

Non paid employees

Those who work without salary compensation. In small family farms, this form of employment includes the entrepreneur and family members who work without pay.

Foreign Trade

Foreign Trade

Cabo Verde has a high degree of economic openness (ratio of imports plus exports to GDP) and this shows the importance of analyzing foreign trade in this yearbook.

This chapter on Foreign Trade is to present a framework on the main indicators of foreign trade, including imports and exports as well as companies associated with foreign trade activities. This chapter also presents the values of imports coverage rate.

Imports

Imports of goods

Imports increased 3.7% from 2010 to 2014 in terms of value and reported a decrease of 10.4% in terms of weight in the same period. Consumer goods account for 39.7% of total imports of goods in 2014.

Table 174 - Imports of goods by Rating by Broad Economic Categories - BEC (2010-2014)

	Value (Millions of CVE)	Weight (Ton)
2010	61.861	860
2011	75.160	920
2012	65.711	953
2013	60.201	779
2014		
Cabo Verde	64.131	771
Consumer goods	25.474	197
Intermediate goods	19.878	413
Capital goods	8.971	17
Fuel	9.808	143

Source: INE

In 2013, although there were 690 importers, there is a clear downward trend given that in 2010 there were 761 companies, therefore, a reduction of about 71 importing companies. This reduction occurred with higher incidence in Santo Antão that showed a decrease by 63%; in absolute terms, however, the islands of Sal and Santiago had a reduction of 42 companies each.

Foreign Trade

Table 175 - Importers of goods per island (2009-2013)

	2009	2010	2011	2012	2013

Source: INE

There is a merger of suppliers, that is, the largest trading partner (Europe) represents 80.7% of the total import value and 83% in terms of total weight imported. It should also be highlighted the weight of Portugal, from where Cabo Verde imports 39% of total imports in value terms and 52% in terms of weight.

The African continent is the economic zone where the weight of activities in the imports' structure is less expressive, although Cabo Verde is an ECOWAS member country.

Table 176 - Imports of goods according to economic zones (2010-2014)

	Value (Millions CVE)	Weight (Ton)
2010	61.861	860

Exports

Exports of goods

Exports of Cabo Verde are concentrated in consumer goods. From 2010 to 2014 there was an increase of 72.6% in total exports and an increase of 128% in terms of weight was noticed in the same period.

Table 181 - Exports of goods, by classification of Broad Economic Categories (2010-2014)

Exporting companies are unevenly distributed in the country, while having increased 47% from 2009 to 2013. According to the data in Table below, in 2013, most of these companies (82.4%) were in Santiago (54.2%) and São Vicente (28.2%). In 2013 there were 131 exporting companies in the country, 42 more companies than in 2009. This growth was constant throughout the 2009-2013 period.

Services Export

Exports of services came an upward trend from 2010 to 2013 but in 2014 there was a decline due to the reduction of exports of transport services, travel and other business services.

The three main services exported by Cabo Verde (transport, travel and communication services) represented on average 93.3% of the total in the period under review.

Table 187 - Exports (Millions of CVE) by type of services (2010-2014)

	2010	2011	2012	2013	2014
Services	42.173,9	47.559,7	51.924,6	56.002,9	52.705,0

Foreign Trade

It is also worth highlighting the fact that with the recently checked export dynamics, the import by export coverage rate has increased systematically and from 2010 to 2014 increased by 4.1 percentage points from that from 6.3% in 2010 went to 10.4% in 2014.

Exports are by far higher than imports in services, but still insufficient to cover the deficit found in goods.

Table 188 - Coverage rate of imports by exports (2010-2014)

Coverage rate (%)	2010	2011	2012	2013	2014
Goods	6,3	7,2	7,4	9,5	10,4
Services	168,4	199,7	170,9	204,4	184,9
Total	53,0	53,5	59,1	70,5	64,1

Concepts

Special trade

The Special Trade comprises:

1. **On import:**
 - a) Merchandise shipped for domestic consumption;
 - b) Goods entries in temporary admission to undergo modification, repair or hand labor complement;
 - c) goods placed under warehousing procedure should then be submitted for processing and hand labor complement and,
 - d) Goods intended for the national navigation, but not cleared for consumption.

2. **On export:**
 - a) Goods produced in Cabo Verde;
 - b) Nationalized goods, ie, imported goods, offered for the free disposal of importers after they had been settled for any rights they may be considered or treated with the modification, repair or hand-to-work complement by virtue of having been admitted with temporary exemption and,
 - c) National and nationalized Goods and intended for foreign shipping.

This clearing procedures do not include:

1. **On import**
 - a) Goods entries at normal temporary basis (temporary admission);
 - b) goods returning to another country where they had been sent on a temporary basis (re-import).

2. **On export**
 - a) Goods which have temporarily left the custos;
 - b) Goods returned as a result of a temporary import, ie the re-exported;
 - c) National and nationalized Goods destined to domestic navigation.

Country of origin and consumption

Imports are calculated by country of origin, that is, if it is a natural product, the country where it was produced, in the case of product for work, the country where it has received the form in which it was introduced in the importing country.

Exports are recorded according to the country of consumption, ie where the goods must have the application for which it was produced or manufactured or where it should be processed or subject to hand-to-work supplement.

Quantities

The net weight of goods is expressed in tonnes.

Values

The CIF value is considered for import and the FOB value for export , expressed in thousand escudos and millions of escudos

Rounded figures

The quantities and values of goods are recorded in sub-multiples of the publication of the units, so that, due to rounding, totals may not correspond to the sum of the partial.

Classification

The goods were classified according to the nomenclature of the Harmonized System (HS). The United Nations Classification standards ISO II is used in this yearbook, to classify countries.

Agriculture and Fisheries

Agriculture

Cabo Verde, archipelagic and Sahelian country, is extremely vulnerable to natural phenomena, particularly droughts; the average annual rainfall ranges from 60mm on the flat islands to 240-550 mm in the mountainous islands. However, the agricultural sector, despite its structural weaknesses, has played a major role for the country, allowing the livelihood of a large number of families whose support and organization of family life are closely linked to the land.

Despite the shortcomings, the agricultural sector was an important factor in economic and social development of Cabo Verde and should continue to be one of the most important aspects of the country's development, which has registered several investments in the modernization of agriculture (drop-by drop irrigation, new production technologies, protected crops and hydroponic professional training in agricultural research and knowledge transfer to farmers, diversification and production scheduling) and especially the mobilization and collection of water (dams, dikes, boreholes, reservoirs; improved management of water resources; renewable energy in water pumping etc.), in conjunction with other economic sectors particularly tourism, so that the sector can respond in a satisfactory and sustainable manner to the challenges and new opportunities and paradigms, particularly in the agribusiness.

In this Yearbook, the Agriculture and Fisheries chapter intends to provide a portrait of the production, import, export and production factors related to the agricultural sector (for which data is based mainly on the Census of Agriculture 2004 - RGA 2004) and the sector of fisheries. Noteworthy that these sectors are the pillars of food and nutrition security of the country and source of income and employment opportunities in all the islands. They include activities that employ large numbers of hand labor and participate to a considerable extent in the export of goods.

Agricultural population

With regard to the agricultural population, comparing the results of the Agricultural Census (AC) 1988 with the Census of Agriculture (RGA) 2004, it appears that there was a significant increase in people engaged in agricultural households and on average there was an increase of 29%, and the island of São Vicente registered the largest increase, of more than 1,000% followed by the island of Maio and Santiago, with 46% and 34%, respectively. The island of Boavista was the only one that has undergone a reduction of the order of 11%. Also worth mentioning that Santiago Island was home to about 57% of the country's agricultural population, and the Municipality of Santa Catarina held about 16% of the national total.

Both in 1988 and 2004, it appears that the agricultural population was mostly female. It should also be noted that from 1988 to 2004, the number of farming families, but their average size of the same, in all the islands, has decreased, corresponding to a variation of -7.4%, that variation being more pronounced in the islands of S. Vicente, Sal and Brava.

Regarding the level of basic education in AC 1988, only 41% of heads of households of both genders, were literate, and this rate has increased to 63.5% in 2004. In this census, it was found that most of the heads of (48%), has the level of basic education, but the proportion of those with no education still remained high (36.5%). The secondary and post-secondary covered 5.7% of total breadwinners and those who had a professional agricultural training were almost nonexistent (0.4%). The highest rates of unschooled heads of households were on the islands of unschooled Santo Antão and São Vicente, 42% and 41%, respectively, but in Santiago (39%) the rate was also higher than the national average, with the higher rate occurring in the Santa Catarina municipality (46%).

Agriculture and Fisheries

With regard to indicators of living conditions and comfort of agricultural households (AH) in the 2004 AC, these indicators were registered in detail, having found that almost all the AH had an individual home (95.5 %) and only 0.5% were living in tents. In terms of sanitation, less than half (44%) of the dwellings of the AH, had toilet or latrine, and the Islands of Fogo, Brava, São Vicente and S. Nicolau, these conditions were above the national average and in Santiago the lowest.

As for the water supply, the fountain was the main source of water supply of the AH (45%), followed by tap water with 27.6%, and water from the springs and water tanks (in Fogo, Brava and Tarrafal municipality), with 10.8% and 7.6%, respectively. Yet supplying by autotanque, water wells, and other sources of supply, fulfilled the AH needs with 3.7%, 3% and 1.9%, respectively.

With regard to energy sources, the main source of energy used in the kitchen was still firewood, used by 80% of the Heads of Household, with higher rates in Santiago (89%) and Fogo (87%) and there are municipalities where this indicator reached values of 94% and 96% respectively in Tarrafal and São Miguel. The lowest value was recorded in Sal, with 5.4%. The second source of energy for cooking was gas. The remaining sources found were oil at 14%, but at high utilization rates in Boa Vista (64%) Maio (56%) and Fogo: (44%), respectively, and also coal and electricity, both with 6 %.

Amongst the comfort level indicators, radio is the most important for most AH: 75% of them owned a radio unit (ranging from 71% to 91% depending on the islands), followed by television set, which reached higher proportions than the fridge - 42% (ranging from 34% and 73%) compared to 30% (varying from 23% and 69%). The video was already an element of comfort to 17% (ranging from 14% to 46%) of the AH and the computer, although in a low incidence, owned by just 1.2% of the AH, already in the islands and the municipalities, and the internet access a reality for 0.6% of those who had a computer. Owning a car was limited to only 5% of the AH.

Table 190 - Proportion of the agricultural population by gender and average size of farm families by island (1988 e 2004)

	1988		Average family size	2004		Average family size
	Male (%)	Female (%)		Male (%)	Female (%)

Farm Structure

In terms of the farm structure it is to be noted that in 2004, more than 99% of them are Family Farms (AH). Of the few farms that are not family type, most of them are operated by public entities (government or Municipalities). It is further noted a small number of entities such as cooperatives or associations of farmers.

Noteworthy that 76.3% of farms were focused on rainfed agriculture and the three main agricultural islands concurrently - Santiago (59.1%), Santo Antão (14.7%) and Fogo (14.5%) - represent 88.3% of the AH.

The islands of Fogo and Brava feature a percentage of 89% of farms engaged in rainfed crop. Santo Antão Island, S. Nicolau and Santiago showed a percentage of 38.6%, 17.4% and 16.5% of farms dedicated to the culture of irrigated land, respectively. It is further noted, that livestock is an activity present in 92% of farms in the country.

Regarding the form of exploitation, the majority, ie 57% of the units are run by own account but it is also common to find partnership exploration systems (20.9%) or lease (12.5%).

Another important indicator is the feminization rate of the headship of the EAF. As early as 1978, women ran more than a third of the EAF, up to 40% in Brava and 44% in Maio. From 1978 to 2004, there was generally significant increase in almost all islands except the island of Boavista, where possibly the phenomenon of female emigration has continued and Santo Antão and Brava, where there was a slight decrease.

The total arable land is 445,306 liters of which 99.6% belongs to the EAF. The state and the municipalities, as well as producer associations hold, each 0.2% of this area. The vast majority of EAF, concentrated in 1-5 liters area class, then the class 6 to 10 liters, with 36 and 34%, respectively. In the 1-5 class, the islands that contribute most are the Brava Island (79.7%), S. Nicolau (66.2%), Boa Vista (55.1%), Santiago (37.1%) and Santo Antão (28.3%). In the 5-10 liter class, the islands with higher percentages are the island of Santiago (41.8%), Maio (31.6%), Fogo (28.8%), Santo Antão (26.5% and Boa Vista (23.7%). the 35,145 EAF practicing agriculture hold 443,588 liters of the total arable land of the country. Of this area, 402,948 liters (90.8%) are dryland, 34,755 liters (7.8%) are irrigated land and 5,884 liters (1.3%) are irrigated land and dry land. the islands with larger arable agricultural areas are Santiago (52.7%), Santo Antão (20.8%) and Fogo (15.8 %). The remaining islands hold only 10.7% of the total arable agricultural area.

Chart 6 – Arable area by class (2004)

Source: Ministry of Rural Development (MRD)

More than half of dryland available total area (54.9%) is found in the Island of Santiago and Santo Antão and Fogo have almost the same area, 17.6 and 17.3%, respectively. In turn, the Santo Antão Island holds a little more than half of the irrigable area of the country, 51.3%, followed by Santiago, with 31.8%. S. Vicente is the third island with more available area for irrigation.

As can be seen, in Cabo Verde, the average size of parcels, both in rainfed conditions or irrigated is very small. On average, each family farm has 12.63 liters of arable land (equivalent to about 1.3 ha). In dryland this average is 11.92 liters, 4.95 liters in irrigated and rainfed and irrigated 6.31 liters.

In terms of parcels form of exploitation, the Own Account is the dominant form of exploitation in 54% of non-irrigated land and 62% of irrigated land. The Partnership ranks second, with 23% of rainfed operating areas and 21% of irrigated areas. Lease represents 14.6% of rainfed operating areas and 10% of irrigated areas. Land operated in usufruct represented 5.3% in non-irrigated and 6% on irrigated land.

The Lending and tenure are not representative, with greater emphasis in certain islands.

Table 197 - Parcels of family farms according to operation form per island (2004)

Agricultural production (in the strict sense)

The horticultural sector has seen great progress with noticeable gains in increasing production and productivity encouraging a gradual change in the structure of the primary sector and playing an increasingly important economic role.

The data produced in recent years (Vegetables and Tubers and roots crops production estimates from 2010 to 2014) indicate that there is a clear crop diversification and increased production of all cultures. Overall, from 2010 to 2014 there was an increase of 25.7% in the production of vegetables and the production of roots and tubers more than doubled, increasing by 107%.

The tomato is the most representative product in vegetable crops and has shown a participation of 29.7% of the total in 2014 (and in 2010 had a total share of 36.3%).

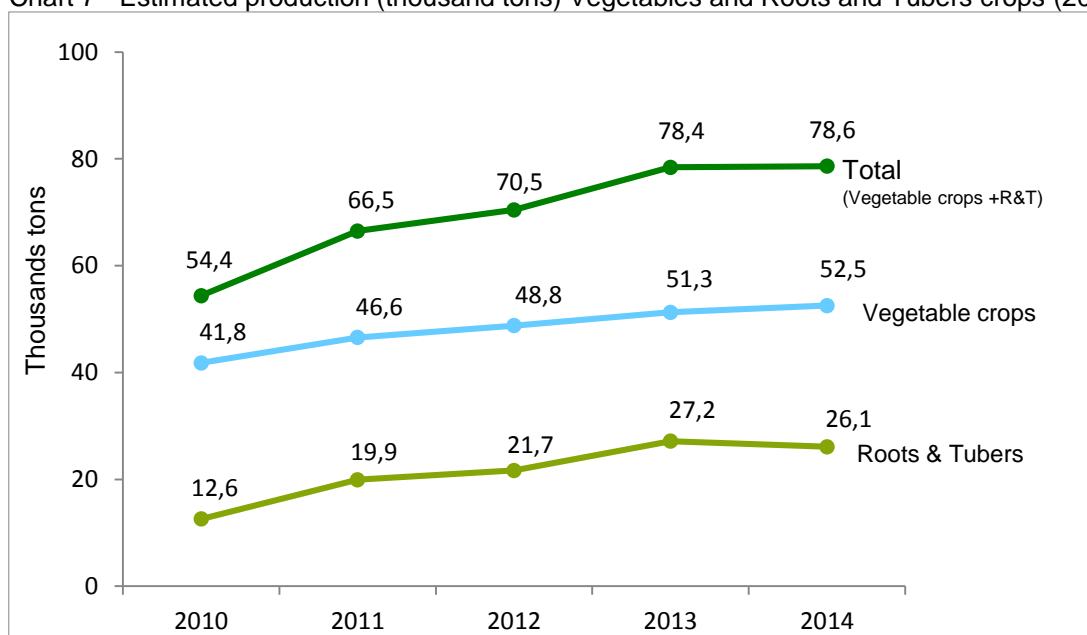

Table 198 - Estimated production (tons) Vegetables and Roots and Tubers crops (2010 – 2014)

Chart 7 - Estimated production (thousand tons) Vegetables and Roots and Tubers crops (2010 – 2014)

Source: Ministry of Rural Development (MRD)

Regarding the production of fruit, estimates of annual production in 2014 amounting to 17,470 tons, consisting mainly of bananas, (approximately 60% of total production) that although it has been reduced from 67.5% in 2010 to 60.3 % of fruits produced in the country, showed a growth trend and from 2010 to 2014, increased to around 68.6%. Also to be noted an increase in the production of other fruits like mango and papaya during the period 2010-2014.

Table 199 - Estimated production (tonnes) by type of fruit crops (2010-2014)

Fruit Crops	2010	2011	2012	2013	2014

Chart 8 - Production estimates (in thousand tons) according to the main fruit crops (2010 – 2014)

Source: Ministry of Rural Development (MRD)

Regarding cash crops, i.e., coffee, grape and sugarcane (the first two with higher spatial specificity), according to estimates, an increase since 2010 is to be noted; from 2012 to 2014 It may be noted an increase of 18.5% in the total production of these crops, however, the vineyard stands out with 83% of cash crops total production

The annual production estimates of coffee suggest a variation from 33 to 52 tons of this product, highlighting coffee from Fogo.

Table 200 - Estimated production (Ton.) of cash crops (2010 – 2014)

Cash Crops	2010	2011	2012	2013	2014

Vineyard	160	248	277	346	385
Sugarcane	25	28	28	28	28

Source: Ministry of Rural Development (MRD)

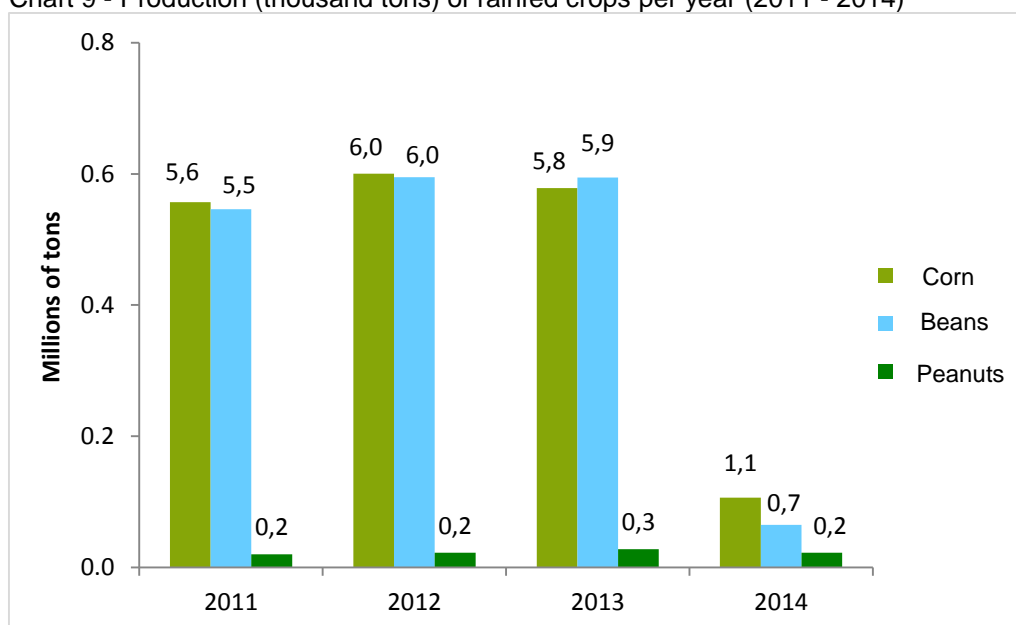

Data indicate that the production of non-irrigated crops registers fluctuations in the yearly rainfall. After a few years of good production, the rainfed crops registered a considerable decrease in production (about 83%), both in corn (-80.9%) as in the bean (-88.1%) that are grown in intercropping. However, it should be clarified that these figures are due to poor rainfall recorded in 2014.

Table 201 - Estimated production (tons) of rainfed crops (2010 – 2014)

Animal Production

The family livestock farm is an important component of income and livelihoods of farm families, and the most raised species by agricultural families are chickens and goats.

Chart 11 - Proportion of livestock by species (2008)

The livestock activity has shown a structural change, if previously the creation of small ruminants was predominant, particularly goats and poultry (chicken), the latest estimates indicate that the pig farming has shown a significant growth and almost doubled from 2007 to 2008. All the islands show diversification in terms of livestock, though the focus is on the islands of Santiago, Fogo and Santo Antão which only on the island of Santiago in 2004 represented about 68.2% of the cattle, 78.7% of sheep, 40.4% of goats, 63.5% of pigs and 50% of birds in the country.

There have been positive developments for the production of meat in recent years, although it is very constrained by the fluctuations in forage availabilities in the case of ruminants and also the occurrence of episodes of African swine fever in pigs. From 2010 to 2014 the estimate was that the production of beef, pork, sheep and goats increased by 3.8% and pork accounted for about 66.9% of the total. It is worth highlighting the chicken meat production has increased about 39.3% in the same period.

Table 205 - Meat production estimate (tons) (2010 – 2014)

The estimates on milk production also point towards a positive development, having grown about 8.1% in the period from 2010 to 2014. In that year it was estimated that about 31% of the milk produced was from bovine animals and 69% the caprine species.

For eggs production, this also registered a considerable growth of about 27.8% in the 2010-2013 period.

Table 207 - Milk estimated production (in liters) (2010 – 2014)

Forestry

Afforestation in Cabo Verde, carried out intensively since the beginning of national independence, by successive governments, with the strong support of international cooperation, has played a crucial role in the fight against desertification and, in the background, allowing the satisfaction of the needs for most of the population.

Currently, the country has a patrimony in woody vegetation, estimated at 89,903 ha, of which 54,919.4 ha (61%) is classified as forest, according to FAO standards³.

Table 209 - Area covered by woody vegetation and forest and their proportions by island

	Area with woody vegetation (ha)	% Woody vegetation area / island	Área florestal (ha)	% forest/island area	% National forest area
Cabo Verde	89.903,10		54.919,4		13,60

In recent years, one of the major threats to the destruction of this valuable heritage has been the occurrence of forest fires, with some frequency, particularly on Fogo Island. The major forest fires in the country, have occurred precisely on Fogo Island being the 2013 and 2015 fires, the most significant, with 437 and 801 ha burnt, respectively.

Table 211 - Wooded area (in hectares) burned in forest fires per island (2011 – 2015)

Fisheries

Fishing has always been an important economic activity for Cabo Verde. This sector along with agriculture has allowed greater resilience of the rural population and reduced the dynamics of rural exodus, as well as provide an opportunity for employment and income for the population.

Fishing in the country is divided into small-scale fishing, which is carried out with boats called "mouth open vessels" and directed to coastal fisheries and also has a semi-industrial fishing and industrial fishing, which is done using larger vessels, usually with inboard engines and greater autonomy.

Artisanal fishing in 2011 had 1,239 vessels and 3,717 fishermen. The island of Santiago has a higher number of small fishing vessels, representing approximately 39.7% of the national total.

In terms of industrial fishing, in 2011, it accounted for 90 vessels, employing about 1,092 fishermen. About 47.8% of the vessels were in Santiago Island and approximately 26.7% were on the island of São Vicente.

Catches increased by 28% from 2010 to 2013 and the artisanal fisheries catch has had a slight decrease (about 5.3%) while industrial fishing has increased about 59.7% in the same period. Artisanal fishing is more diverse and catches are concentrated around the tuna (35%) and demersal stocks (28%) while the industrial fisheries it is to be noted a certain predominance of tunas (66%) and small pelagic species (22%).

Table 214 - Nominal catches of fish (in tons) according to the type of fishing for main species

	Artisanal	Industrial	Total
2010	4.617,7	4.831,7	9.449,4

Mollusks, in shell or not, live, fresh, chilled, frozen, dried, salted ...	183,71	58,69

Source: INE

Indicators for the import of fish indicate that the country is still not self-sufficient in relation to consumption of fish. The import has increased and in 2010 had a value of 162.3 million CVE. From 2010 to 2013 imports increased by about 109.4% and correspond mainly to imports of fish fillets and other fish meat (minced), fresh, chilled or frozen, representing about 30% of total imports in value and 31% of total imports by weight.

Sea products take a significantly part in the export basket of the country. From 2010 to 2013 the export value of fish increased (63.6%), however, the amount (weight) decreased by 0.85%. More than 99% of export of marine products are frozen fish. Despite the growth of fish imports, the trade balance in relation to these products is surplus, that is, the country exports more than it imports, fishing is therefore a great generator of foreign exchange for the country.

Table 216 - Fish exports - weight and value (2010-2014)

	Weight (Tons)	Value (Millions of CVE)
2010	13.328,6	1.590,38

Environment

The inclusion of the topic in this environment directory, aims to provide the Cabo Verdean society a picture frame of protected areas and the conditions of housing in terms of access to water, sanitary facilities and habitability of houses. These indicators somewhat portray the diversity of the living conditions of the population and the data indicate that although an improvement in indicators is evident, there is great inter-regional heterogeneity in the country in terms of environmental conditions.

Cabo Verde is a very fragile and vulnerable archipelago to climate change. Aware of this, the Government has implemented an ambitious program of environmental protection, and currently about 18% of the land area and 6% of the marine area are protected areas.

Table 217 - Area and proportion of protected areas (Land and marine) by municipality (2015)

	Area (Km ²)		Proportion	
	Land	Marine	Land	Marine
Cabo Verde	733,57	55.924,74	18,19	5,66

Environment

The data indicate that in terms of the proportion of the population with access to drinking water from improved sources, ie, access to water through "Fountain", "Autotanque", "Public Network" or even if got by neighbors, a considerable improvement was registered, from 78% in 2000 to 91% in 2014. This increase of 13 percentage points in national terms has a very important qualitative dimension, taking into account that the increase was more pronounced in rural areas, where access to water has always been a major constraint. First there were 65% of the population with access to water through improved sources in 2000, in 2014 it increased to 77%, an increase of 17%.

Source: INE

⁵ For S. Nicolau it was not possible to know the disaggregated data by the two municipalities in 1990. The entire island was one municipality at that time and had two parishes (Parish of Nossa Senhora da Lapa and Nossa Senhora do Rosário). When the parish was divided in two municipalities the areas of the two existing parishes were altered, as well as having been created another parish, so it is not possible to consider the data made available per parish of the Census 1990 since it does not correspond to the current areas of the two municipalities.

⁶ In 1990 the area of the Tarrafal municipality corresponded to 2 parishes. These Parishes, Santo Amaro Abade and S. Miguel Arcanjo, correspond to existing municipalities of Tarrafal and São Miguel respectively. In 1990 the area of the Santa Catarina municipality corresponded to the two parishes. These Parishes, Santa Catarina and São Salvador do Mundo, correspond to existing municipalities of Santa Catarina and São Salvador do Mundo respectively. In 1990 the area of the municipality of Santa Cruz corresponded to the two parishes. These Parishes, Santiago Maior and S. Lourenço dos Orgãos correspond to the current municipalities of Santa Cruz and S. Lourenço dos órgãos respectively. In 1990 the area of Praia da county corresponded to the 5 parishes. These Parishes, Nossa Senhora da Luz, S. Nicolau Tolentino, Nossa Senhora da Graça, Santíssimo Nome de Jesus and S. João Baptista, correspond to existing municipalities of São Domingos (2 civil parishes), Praia and Ribeira Grande de Santiago (2 districts) respectively.

⁷ In 1990 the municipality of Mosteiros did not exist, but the current area corresponded to the Parish of Nossa Senhora da Ajuda. The current area of S. Filipe county corresponds to the Parishes of S. Lourenço and Nossa Sra. Da Conceição. The current area of the municipality of Santa Catarina do Fogo corresponds to the Parish of Santa Catarina

Environment

Another indicator that is worth highlight is the proportion of urban population living in degraded houses or shacks. In 2000 about 61.6% of the urban population was living in housing units that offered precarious conditions for a decent life. The data indicate that there has been an improvement in this indicator and that in 2013, only 35.2% of the population was living in degraded houses or shacks (a reduction of 43% in that period). Only Boavista Island showed a step backwards from this indicator, where there was an increase of 8 percentage points from 2000 to 2013, causing about 60% of the population to live in precarious housing.

Table 220 - Proportion of urban population living in rundown or precarious houses⁸ (2000, 2010, 2013-2014)

	2000	2010	2013	2014

Source: INE

⁸ It represents the population living in households with one or more of the following conditions: Living in a tent, container, Makeshift in building not intended for housing: factories, schools, fountains, garages, etc; Has no access to improved drinking water source; Lacks access to improved sanitation facilities; The living units have ceiling, walls and floor made of non-durable materials; Overcrowded - more than 3 people sharing the same room.

Political Participation

Political Participation

The issue of political participation, whose focus is mainly on the participation of women in the national parliament and within the Executive Power, the main indicators of the elections' results in 2011 (legislative and presidential) and 2012 (municipal) are also presented to highlight the effective participation of the population in the last elections.

The tables were prepared based on data published in the Official Bulletin and demonstrate the electoral framework of Cabo Verde.

Women in politics

The data indicate that the participation of women has increased considerably from the 1991 and 2011 elections. In terms of participation of women in the National Parliament, there is an increase of 17 percentage points, corresponding to a change of 447% (400 %) from 1991 to 2011. a similar behavior can be seen in relation to the participation of women within the Executive Power, where data indicate an increase of 49 percentage points and currently (until October 2015), women account for 55% of governmental positions.

Table 221 - Number and Proportion of seats held by women in national parliament

Year	Total seats	Women	
		No	%
1985	83	10	12,0
1991	79	3	3,8
2001	72	8	11,1
2006	72	11	15,3
2011	72	15	20,8

Political Participation Indicators

On the political participation in the various categories of elections (presidential, legislative and municipal) here are the main indicators (Abstention, proportion of votes of the most voted candidate etc.) as well as the results of the most recent elections (for each category); abstention is a fact that is to be highlighted. In virtually all of the elections held in 2011 and 2012 it is noted that the abstention rate is more than 20% whereas in the electoral constituency of Europe and Rest of World this rate is higher than in the last legislative and presidential elections which registered abstentions rate of 48% and 72%, respectively. The blank and void votes showed a very low percentage in all elections.

Table 223 - Indicators of participation in legislative elections (2011)

Electoral constituency	Total votes			Abstention (%)	Most voted party (%)
	Valid	Blank	Void		
Total National	77,5	0,6	0,4	21,9	40,3
Santo Antão	81,4	0,9	0,7	17,7	40,6
S. Vicente	73,1	0,6	0,5	26,4	32,4
S. Nicolau	77,1	0,9	0,9	22,0	34,6
Sal	66,4	0,3	0,4	33,3	30,5
Boa Vista	71,5	0,4	0,7	28,1	37,4
Maio	83,5	0,4	0,3	16,1	33,9
Santiago Norte	79,5	0,7	0,3	19,8	43,3
Santiago Sul	79,1	0,5	0,4	20,4	42,9
Fogo	78,6	0,4	0,1	21,0	49,7
Brava	76,0	0,9	0,5	23,0	39,2
Total Foreign	59,5	0,6	0,4	39,9	33,8
